                    MAINTENANCE.

- SUBCELLULAR LOCATION: Secreted.

- TISSUE SPECIFICITY: CARTILAGE PRIMORDIA AND CARTILAGE.

- INDUCTION: REPRESSED BY RETINOIC ACID.

- PTM: MAY POSSESS TWO INTRAMOLECULAR DISULFIDE BONDS.

- SIMILARITY: BELONGS TO THE MIA / OTOR FAMILY.

- SIMILARITY: CONTAINS 1 SH3 DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Submitted (AUG-1996) to the EMBL/GenBank/DDBJ databases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE-96216414; PubMed-8621736;
Dietz U.H., Sandell L.J.;
"Cloning of a retinocacid-sensitive mRNA expressed in cartilage and
during chondrosenesis.";
                -1- FUNCTION: ELICITS GROWTH INHIBITION ON MELANOMA CELLS IN VITRO
AS WELL AS SOME OTHER NEUROBETOBERMAL TUMORS, INCLUDING GLIOMAS.
-1- SUBCELLULAR LOCATION: Secreted.
-1- TISSUE SPECIFICITY: ALL MALIGNANT MELANOMA CELL LINES TESTED AND INFREQUENTLY IN GLIOMA CELL LINES.
-1- PTM: MAY POSSESS TWO INTRAMOLECULAR DISULFIDE BONDS.
-1- SIMILARITY: BELONGS TO THE MIA / OTOR FAMILY.
-1- SIMILARITY: CONTAINS 1 SH3 DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

TO A LESS TO TRANCE FACTOR FOR GTP-BINDING PROTEINS RHOA, RHOG AND,

TO A LESSER EXTENT, RAC-1. BINDS PHYSICALLY TO THE NUCLEOTIDE-FREE
STRATES OF THOSE GTPASES.

TO A LESSER EXTENT, RAC-1. BINDS PHYSICALLY TO THE NUCLEOTIDE-FREE
STRATES OF THOSE GTPASES.

ARE PRODUCED BY ALTERNATIVE SPLICING.

-1- SIMILARITY: CONTAINS 1 DBL-HOMOLOGY DOMAIN (DH).

-1- SIMILARITY: CONTAINS 1 PLOWALIN.

-1- SIMILARITY: CONTAINS 1 ZINC-DEPENDENT PHORBOL-ESTER AND DAG

-1- SIMILARITY: CONTAINS 1 SH2 DOMAIN.

-1- SIMILARITY: CONTAINS 2 SH3 DOMAIN.

-1- SIMILARITY: CONTAINS 2 SH3 DOMAIN.

Sequence 1.7 Application US/09244796

Patent No. 6281344

GENERAL INFORMATION:
APPLICANT: Szostak, Jack W.
APPLICANT: Szostak, Jack W.
APPLICANT: Liu, Rihe
TITLE OF INVENTION: SELECTION OF PROTEINS USING RNA-PROTEIN
TITLE OF INVENTION: SELECTION OF PROTEINS USING RNA-PROTEIN
TITLE OF INVENTION: 199-00-05
FILE REFERENCE: 00786/350007
CURRENT FILING DATE: 1999-02-05
EARLIER APPLICATION NUMBER: 60/035,963
EARLIER FILING DATE: 1999-01-05
EARLIER PILING DATE: 1999-01-05
EARLIER PILING DATE: 1998-01-14
NUMBER OF SEQ ID NOS: 33
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 17
LENGTH: 289
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 9.2%; Score 30.4; DB 4; Length 289; Best Local Similarity 6.6%; Pred. No. 1.1; Matches 16; Conservative 96; Mismatches 130; Indels
